

MagnaPrint® Thickener CSP

Thickener for increasing product viscosity

MagnaPrint® Thickener CSP is a highly efficient multifunctional thickener developed specifically for the textile printing industry. It is supplied as a high purity inverse emulsion of synthetic acrylic co-polymers.

The polymer used is already in solution therefore thickening of printing paste formulations is almost instantaneous. Pigment printing formulations can be effectively thickened by the direct addition of MagnaPrint® Thickener CSP to the mix or by following the conventional method of preparing a thickener stock with or without other ingredients.

MagnaPrint® Thickener CSP is a suitable multifunctional thickener for use in printing cotton, polyester, blended fabrics or other fibrous materials.

MagnaPrint® Thickener CSP as supplied has a very low viscosity and can be directly pumped and metered.

Application

MagnaPrint® Thickener CSP can be used as a back thickener for ready-made printing pastes and specialties.

MagnaPrint® Thickener CSP can be added 0-1 % depending on desired viscosity.

SPECIFICATION

STORAGE

In cool place properly closed:
>5°C (40°F) <25°C (77°F)
